Technical Skills

Tools: Intercom, Notion, Slack, GitHub Issues & Discussions, Git, Zendesk, WorkOS
Languages & Frameworks: JavaScript, TypeScript, React, Node.js, Python, Bash, Markdown

Professional Experience

Community & Support Associate **December 2025 – Present**
Zencoder *Remote*

- Owned end-to-end resolution of **900+ customer conversations** across Intercom, Discord, and email, triaging issues and escalating to Engineering only when genuinely necessary.
- Built and shipped a **custom Discord bot**, deployed on Railway, automating support workflows by unifying Discord, email, and Intercom into a single system, a self-initiated project born from a real workflow gap.
- Unblocked customers experiencing login issues by troubleshooting WorkOS-based authentication and Single Sign-On (SSO) flows.
- Built and launched an OSS contributor program, giving the community's most engaged builders a structured path to contribute to open source.

DevRev **Bengaluru**
Product Advocate *March 2025 – November 2025*

- Built a **tiered points-based system** to convert passive Discord members into active contributors (20-point Active Member threshold, 500-point Champion tier), growing the community to **3,533+ members**.
- Took over and rebuilt the **DevRevU website** from scratch (courses, workshops, featured videos); its September 2025 launch drew 417 sessions with a 78% returning-user rate.
- Delivered a **3-day 'GenAI for Educators' workshop series** for 30+ university professors culminating in an educational hackathon, and hosted 2 further student hackathons drawing 100+ participants and 8 new regular contributors.
- Released 2 self-serve courses (**436 learners**, 4.04/5 feedback) and ran 14 customer training sessions (127 attendees, 4.5/5 feedback).
- Grew Reddit into a self-serve community through product updates and cross-posted customer solutions, reaching a 22.37% average engagement rate.

Frontend Engineer *May 2023 – March 2025*

- Diagnosed and fixed a production **API issue** where notification calls had doubled after shipping a new feature, tracing the root cause and optimizing the call pattern.
- Built customer message translation on tickets (Google Translate **API**) and later resolved a rate-limiting issue that surfaced in production.
- Shipped production features in **React** and wrote end-to-end tests in **Cypress**, including an AI text enhancer and a ticket/issue summarizer.

Technical Writer **May 2022 – December 2022**
Google Season of Docs - AsyncAPI (Open Source) *Remote*

- Improved accessibility and content discoverability on the AsyncAPI site and implemented a documentation style guide for community contributors.

Open Source Contributions, Talks & Projects

- **Kestra** (open-source workflow orchestration platform) — **6 merged pull requests** to the frontend, including a bug fix for editing existing flows and features such as drag-and-drop panel management, in-app documentation search, and unsaved-changes detection: PR #8377, #8458, #8365, #9198, #9268, #8378. Active on **GitHub Issues and Discussions** throughout, tracking and following up on real user-reported problems.
- Delivered live **Linux workshops** covering essential commands and system administration to student audiences: Getting Started with Linux, Linux Workshop.
- Spoke at **KubeCon + CloudNativeCon North America 2022** and gave a lightning talk at KubeCon 2024 on the student/Cloud Native hackathon journey (see also "We're In! Students Hacking Their Way Into the CNCF").
- Built LearnScape, a personal hackathon project.

Education

Aurora's Degree and PG College **November 2020 – August 2023**
Bachelor of Science in Data Science *GPA - 8.45*
